

ActivePDF is the leading global provider of server-side PDF automation tools. We partner with developers, product managers, CIOs, and CTOs that need a single advisor to embed feature-rich digital transformation technologies directly into their enterprise applications and IIM solutions that reliably scale for millions of users.

## ActivePDF Family of Products

### DocGenius™

Rock solid, scalable PDF tools for Windows developers.

#### Compressor

PDF Compression  
[.NET/COM API]

#### Rasterizer

PDF to IMG  
[.NET/COM API]

#### Redactor

PDF Redaction  
[.NET API]

#### Server

In-App PDF Generation  
[.NET/COM API]

#### Spooler

Print PDF to Paper  
[.NET/COM API]

#### Toolkit

Full PDF Manipulation  
[.NET/COM API]

#### WebGrabber

HTML to PDF  
[.NET/COM API]

#### Xtractor

PDF Data Extraction  
[.NET/COM API]

### DocSight™

Server-based PDF content curation automation for digital business-critical applications.

#### DocConverter

PDF Conversion  
[Solution w/ API]

#### Meridian

Network PDF Printer  
[Solution w/ API]

#### OCR

Full-Text & Zonal OCR  
[Solution w/ API]

### DocSpace™

A family of server applications with user interfaces for viewing, creating, and interacting with PDF.

#### Reader Plus

PDF Viewer/Editor  
[Solution w/ API]

# Toolkit

Toolkit is the powerful developer tool that you need to create, modify, view, extract, and automate data to and from PDF files within software applications. The Toolkit library contains hundreds of properties and methods, designed to tackle any PDF-related task. Whether you need a few documents a day or thousands of pages a second, Toolkit is the high-performance PDF manipulation tool that helps get the job done!

[TRY IT FOR FREE](#) [CONTACT US](#)

## Highlights:

### Create and Modify Form-Fields

Toolkit allows you to easily populate or extract form-field data. Set field properties, control the appearance, and create behavior fields such as:

- Read only
- Required info
- Color
- Fonts
- And more

### File and Page Modifications

With Toolkit you can extract, insert, and rotate pages. Easily append files, stitch and merge PDF files into a single PDF page. Toolkit also enables you to embed and attach files within the PDF.

### Bookmarks and Hyperlinks

Dynamically add links and bookmarks, connecting to a location within the PDF file, an external location, or a URL.

## Features:

- .NET/COM API
- **On-demand PDF creation**
- **Password-protected files**
- **Set stamps, watermarks, bookmarks, and page numbers**
- **Annotation properties**
- **PDF encryption – AES 256**
- **Digital signature timestamping**
- **Create and export comments**
- **Compression – Object Stream**
- **Set viewer preferences**
- **Barcode support**
- **Linearization**
- **PDF versions output**
- **Metadata management**
- **Document assembly**
- **Multithreaded**
- **In-memory execution**
- **And more!**

## Requirements:

### Operating System

- Windows Server® 2008 R2, 2012 R2, 2016
- Microsoft® .NET Framework

### C# Code Snippet: Create PDF from Scratch

```
// Create the new PDF file
intOutFile = oTK.OpenOutputFile(strPath + "new.pdf");

// Set the font and print to the file
oTK.NewPage();
oTK.SetFont("Helvetica", 24);
oTK.PrintText(72.0f, 720.0f, "Hello World!");

// Add an image to the page
oTK.PrintJPEG(strPath + "IMG.jpg", 72, 144, 0, 0, 0);

// Close the new file to complete PDF creation
oTK.CloseOutputFile();
```
